

PRODUCT DATA SHEET DS BL-R

DS BL-R is a sealing ring made from elastomers with dense structure for the DS BL-R plug-in socket, a connection for concrete pipes and reinforced concrete pipes according to DIN EN 1916 and DIN V 1201, whereby the seal is firmly embedded in the socket during manufacture of the pipe.

- DS BL-R is in accordance with the requirements of DIN EN 681-1 / DIN 4060 [88] (seals made from elastomers) and the FBS quality guideline.
- DS BL-R pipe connections fulfill the criteria of DIN EN 1916, method 1-4.
- DS BL-R can be easily connected with the pipe. It is mounted on the base ring and is anchored during manufacture of the pipe in the pipe socket. After removal of the base ring the DS BL-R socket is ready for installation.
- DS BL-R can be used for all pipe production machines with core vibration and radial pressure roller head.
- DS BL-R requires special base rings, which determine, by their shape, the seat of the seal.
- DS BL-R can be supplied for pipes DN 150 to DN 2600 in 6 specific cross sections.
- DS BL-R lines the inner wall of the socket up to the socket face. Lining the entire socket space prevents deposits of dirt and water (ice formation) behind the seal. Removal of a protective strip is not required.
- DS BL-R pipe connections resist high shearing forces.

**Tested and quality controlled by
MPA Berlin-Brandenburg.**

SPECIAL ADVANTAGES

- forms an integrated unit together with the pipe, which enables a quick and safe laying.
- the wedge shape of the seal body eases the pipe centering.
- thanks to the fully lined sleeve, the pipe connection offers an optimum sealing unit .

MATERIAL

DS BL-R is produced from styrene-butadiene rubber (SBR), hardness 50 ± 5 IHRD. The material resists the usual stresses caused by sewage.

Further materials on request.

PIPE REQUIREMENTS (all dimensions in mm)

- DS BL-R pipe connections must fulfil the criteria of DIN EN 1916 and DIN V 1201.
- DS BL-R requires finely dimensioned smooth pipe spigot ends. When producing the pipes inner and outer supporting rings must be used to ensure compliance with spigot end diameters dsp shown in the table.

- The seal seat and the sleeve diameter at the built-in seal must be checked regularly

PRODUCTION OF PLUG-IN SOCKET PIPES DS BL-R

- Mount DS BL-R on the cleaned and lightly oiled base ring. Ensure correct seating and even pre-stretching of the sealing ring. 
- Before putting on the ensure that the socket is completely filled with concrete. Then produce concrete pipe in normal manner.
- After removal of the pipe mould, place inner and outer supporting rings on the spigot end and leave them there until concrete has cured.
- Pull base ring centrally, remove supporting rings.
- After the concrete has fully cured, the BL-R plug-in socket pipe is ready for installation.

PIPE LAYING TIPS

The DS BL-R pipe connections can be installed without any problems using normal construction site equipment. When laying the pipes observe DIN EN 1610 and ATV-work sheet DWA-A 139.

- Clean socket and spigot end.
- Cover thoroughly the spigot end with DS lubricant. The additional smearing of the sealing ring is recommended, as this will help to minimize the mounting forces.
- Move spigot end centrally into socket and pull pipes together.
